

Project Executable Files

Date	03 July 2026
Team ID	XXXXXX
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	NO
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	No

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

OptiCrop/
├── app.py
├── model.pkl
├── requirements.txt
├── README.md
├── static/
│   ├── css/
│   ├── js/
│   └── images/
├── templates/
│   ├── index.html
│   └── result.html
├── dataset/
│   └── Crop_recommendation.csv
├── notebook/
│   └── model_training.ipynb
└── screenshots/
  
```

Field	Details
Hosted / Deployed URL	Not Hosted
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local Flask Server
Repository Link	https://github.com/siva0403p/OptiCrop-AI-Intelligent-Crop-Recommendation-System
Demo Video Link	https://drive.google.com/file/d/1JR5lyYSJQnpE4yKCnylgAwUPf0ny_Jw8/view?t=8.984

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites

- Python 3.10 or above
- pip package manager
- Flask
- scikit-learn
- pandas
- numpy

Steps

Step 1: Download or clone the project.

```
</> Bash
git clone <repository-url>
```

Step 2: Open terminal in the project folder.

Step 3: Install required libraries.

```
</> Bash
pip install -r requirements.txt
```

Step 4: Run the application.

```
</> Bash
python app.py
```

Step 5: Open the browser.

```
http://127.0.0.1:5000
```

Step 6: Enter soil and environmental parameters to predict the recommended crop.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Works only with trained dataset features	Provide valid input values
2	Internet not required but Python libraries must be installed	Install all dependencies using requirements.txt
3	Model accuracy depends on dataset quality	Can be improved with larger datasets and retraining
